the speed of the auto-moving body. A location registration message output unit outputs a location registration message of the given location registration period, mobile terminal sends status information indicating data about its velocity. Amirijoo (6119012) teaches mobile station dynamically and periodically updates location data in a network.

Periodically, a total number of mobile location updates and a total number of failed pagings occurring within the telecommunications network during a prior time interval are ascertained. The total number of mobile location updates and total number of failed pagings occurring within telecommunication network during prior time interval are periodically ascertained. If the ratio is greater than a specified upper limit of threshold value, particular time is decreased and if less than a specified lower limit, particular time is increased. Claims 1,3,5,10,12,14,16,20 are allowable (with other combinations and Applicant's remarks) over the prior art of record since the cited references taken individually or in combination fails to particularly teach determination means for determining a period of location registration of said mobile communication terminal according to said number of consecutive stays of said mobile communication terminal and said frequency of arrival of incoming calls to said mobile communication terminal stored in said storage means.
